PRINTING AND PHOTOGRAPHY DIVISION
WEEKLY REPORT FOR PERIOD ENDING
24 March - 30 March 1983I. Items or Events of Major Interest that have Occurred During the
Preceding Week

A. CAMS 2 Support: All of the 7,000 pages requested as extraordinary copying support by ODP are in process. It is anticipated that, with the use of overtime, the requested due dates for TRW will be met. ODP has indicated that an additional 2,500 pages will be submitted next week for completion by mid April.

B. FBIS-MIDAS: On 24 March, members of P&PD/Plans and Programs Staff met with representatives of the MIDAS Project Team to discuss P&PD support for Phase II Midas scheduled for early 1984. [] was introduced as the new project leader replacing []. The discussions during this meeting centered on tape reliability concerns for Phase I of the project and communication requirements for Phase II.

C. Copier Activities: P&PD representatives along with members of ORD, OIS, and OS attended a demonstration on a 3M copier designed to control copying and/or removal of classified information. While the 3M prototype device does appear to make unauthorized copying of documents and removal from a location difficult, it is by no means fail-safe. Essentially, the 3M machine would affix a tape strip to numbered copies of documents. Unauthorized copying or removal from the room would trigger several types of alarms. However, 3M has not tested against removal of documents and copies by means of shielded briefcases. Also, it appears that one could tear the strip from a controlled copy and replace it with a second copy.

II. Significant Events Anticipated During the Coming Week

None
